

30-Day Complete PHP Course Outline (Beginner → Advanced)

Role: Teacher

Student Goal: Become job-ready in PHP + MySQL + Backend Basics

Mode: Daily lessons + daily tasks + weekly projects

Week 1 — PHP Fundamentals (Days 1–7)

Day 1 — Introduction to PHP

1. What is PHP?
2. Server-Side vs Client-Side
3. XAMPP/WAMP Installation
4. Folder Structure (htdocs/www)
5. Running First PHP Script (`hello.php`)
6. Embedding PHP in HTML
7. Comments (single/multi-line)

Task: Create a simple PHP page displaying your name.

Day 2 — PHP Syntax & Variables

1. Syntax rules
2. Variables
3. Data types (String, int, float, boolean, array, object, null)
4. `var_dump()` and `print_r()`
5. Constants

Task: Display different data types.

Day 3 — Operators

1. Arithmetic operators
2. Assignment operators
3. Comparison operators
4. Logical operators
5. Increment/Decrement
6. String operators

Task: Small calculator using operators.

Day 4 — Control Statements

1. `if, else, elseif`
2. Nested conditions
3. `switch` statement
4. Conditional best practices

Task: Grade calculator using conditions.

Day 5 — Loops

1. `for`
2. `while`
3. `do...while`
4. `foreach`
5. `break` and `continue`

Task: Display numbers 1–100 and even/odd separation.

Day 6 — Functions

1. Defining functions
2. Parameters & return values
3. Built-in PHP functions (string/number functions)
4. Scope (local/global/static)
5. Default parameters

Task: Function that checks even or odd.

Day 7 — Arrays

1. Indexed arrays
2. Associative arrays
3. Multidimensional arrays
4. Array functions (`array_push`, `sort`, etc.)
5. Looping through arrays

Task: Student records array + print table.

Week 2 — Forms, Files & Backend Essentials (Days 8–14)

Day 8 — HTML Forms with PHP

1. `GET` vs `POST`
2. Form handling
3. `$_POST` and `$_GET`
4. Form validation basics

Task: Simple login form.

Day 9 — Advanced Form Handling

1. Required fields
2. Sanitization (`htmlspecialchars`, `trim`)
3. Validation filters
4. Error handling

Task: Registration form with validation.

Day 10 — Cookies

1. Setting cookies
2. Getting cookies
3. Deleting cookies
4. Cookie expiration time
5. Cookies vs Sessions

Task: Store username in cookie.

Day 11 — Sessions

1. Starting session
2. Storing session data
3. Session security
4. Destroying sessions

Task: Login system using sessions.

Day 12 — File Handling

1. Reading files
2. Writing files
3. Append
4. Uploading files (images)
5. File validation (size/type)
6. File system functions

Task: Upload profile picture.

Day 13 — Include & Require

1. Code reusability
2. `include` vs `require`
3. Including templates
4. Header/Footer structure

Task: Convert project into header/footer layout.

Day 14 — Mini Project 1

Project: Authentication System

- Register
 - Login
 - Logout
 - Cookies
 - Sessions
 - File upload
-

Week 3 — PHP + MySQL Database (Days 15–21)

Day 15 — MySQL Basics

1. What is Database/SQL
2. Installing phpMyAdmin

3. Creating DB & tables
4. Data types
5. Primary key, auto increment

Task: Create a users table.

Day 16 — Connecting PHP with MySQL

1. MySQLi vs PDO
2. Creating connection
3. Error handling
4. Closing DB

Task: Connect PHP to database.

Day 17 — CRUD (Create, Read, Update, Delete)

1. Insert data
2. Fetch data
3. Update data
4. Delete data
5. SQL injection intro

Task: Insert & display records.

Day 18 — Prepared Statements

1. Preventing SQL injection
2. Binding parameters
3. Executing secure queries

Task: Secure login system using prepared statements.

Day 19 — Pagination

1. LIMIT & OFFSET
2. Page links
3. Count total records

Task: Display records with pagination.

Day 20 — Searching & Filtering

1. Search input
2. SQL LIKE
3. Display filtered results

Task: Student search system.

Day 21 — Mini Project 2

Project: Student Management System

- Add student
 - Update student
 - Delete student
 - Search & Pagination
-

Week 4 — OOP, Security, APIs & Final Project (Days 22–30)

Day 22 — Object Oriented PHP

1. Classes & objects
2. Properties & methods
3. Constructors
4. `$this` keyword

Task: Create a class `Student`.

Day 23 — OOP Advanced Concepts

1. Inheritance
2. Access modifiers
3. Polymorphism
4. Abstract classes
5. Interfaces
6. Traits

Task: Use inheritance to extend `Student` class.

Day 24 — Error & Exception Handling

1. try/catch
2. Custom exceptions
3. Logging errors
4. Error reporting settings

Task: Handle form errors using exceptions.

Day 25 — PHP Security

1. SQL Injection prevention
2. XSS prevention
3. Hashing passwords (`password_hash`)
4. CSRF protection
5. Validation rules

Task: Secure login/registration.

Day 26 — Working With APIs

1. `cURL` library
2. Sending GET/POST requests
3. JSON encode/decode
4. Using public APIs

Task: Fetch weather API data.

Day 27 — PHP Email Sending

1. `mail()` function
2. PHPMailer introduction
3. Sending attachments
4. SMTP basics

Task: Send test email.

Day 28 — PHP Framework Intro (BONUS)

1. MVC pattern
2. Install Laravel
3. Basic routing
4. Migrations
5. Controllers/Views

Task: Create simple Laravel route.

Day 29 — Final Review + Best Practices

1. Folder structures
 2. Code style
 3. Security checklist
 4. Deployment steps (cPanel/hosting)
 5. Git basics for PHP projects
-

Day 30 — Final Project

Full PHP CRUD Web App (Complete System)

Your students will build a full system:

- ✓ Authentication
- ✓ Dashboard
- ✓ CRUD
- ✓ Image upload
- ✓ Search
- ✓ Pagination
- ✓ Logout
- ✓ Responsive UI
